## Websites usability testing

sites	pros	cons
Oracle.net	Colors are accepted	<p>design is simple but not consistent as the font size is gradually increasing.</p> <p>A lot of white spaces on the right of the page</p> <p>The content of the page is not centered it's on the left</p> <p>Navigation bar has only one link in it so (home) so there is no point of it's existence</p>
arngren.net	Nothing is good about this site	<p>Design is awful everything is everywhere.</p> <p>Too many pictures without any kind arrangement.</p> <p>The text isn't understandable with more than one language</p> <p>Impossible to be used by the user</p>
Google	<p>Simple design</p> <p>Standards are consistent</p> <p>Easy to use by the user</p> <p>Help and documentation</p> <p>Visibility of the system status</p>	<p>The (I'm feeling lucky) button is not helpful could have put another helpful feature in it's place</p>
